

Create automated scripts to test Paysera's currency conversion calculation

Calculator is located under <https://www.paysera.bg/v2/en-LT/fees/currency-conversion-calculator>;

Key functionalities, that have to be covered:

- When user fills "BUY" amount, "SELL" amount box is being emptied and vice versa;
- When user selects country (select option is in the footer), rates must be updated and currency option should be changed to the respective default currency for that country;

- When bank provider's exchange amount for selling (X) is lower than the amount, provided by Paysera (Y), then a text box is displayed, representing the loss (X-Y);

Sell	100	EUR	→ Buy		All	Filter	Clear filter
Currency	Official rate	Paysera amount	Paysera amount	Swedbank amount	SEB amount	Citadele amount	Luminor amount
USD (US Dollar)	1.215800	1.217400	121.74 → Y	119.40 (-2.34) → X	119.37 (-2.37)	119.60 (-2.14)	119.16 (-2.58)

Additional functionalities, that may be covered:

The more, the better. Only if it makes sense :smirk: Use your imagination and write some additional tests if you feel you can cover other important functionalities.

Using automation framework is a must:

You can feel free to choose the framework, that suits you best, along with the Java programming language.
